

<p>Product</p>	<p>Fibron® Horizon® Decking with PermaTech® Innovation</p>
<p>Report</p>	<p>Cutting and Drilling Tips for Installation of Fibron Horizon Decking</p>
<p>Procedures</p>	<p>Cutting:</p> <p>When cutting Fibron Horizon Decking, remember to use a carbide-tipped blade with a minimum of 24 teeth. A frayed edge may result from dull blades or blades with fewer than 24 teeth. Cut edges showing a frayed edge cut can be quickly scraped away with a course sanding block (i.e. 40-60 grit), or a utility knife blade facing backwards and dragged across the area.</p>  <p>Drilling:</p> <p>Traditional twist drill bits are recommended for drilling holes through boards. Spade-style drill bits can cause damage to surface when drilling in hot weather.</p>
<p>Additional Product Information</p>	<ul style="list-style-type: none"> • Ultra low maintenance with superior stain, fade and mould resistance • Patent pending PermaTech surface outperforms traditional composite decking • Reversible boards save on cut and waste • Board Size: 137 mm x 24 mm • Grooved decking available in 3.66, 4.88 & 6.10 m. Square edge decking available in 6.10 m.
